THE FISTULA PROJECT TEAM

**Fistula is
mainly
seen in
young
women**

11 YEARS

12 YEARS

13 YEARS

Our Target Group

States:

Kano & Kaduna

Country

Nigeria

Target Group:

Five (5) Million Women

5,000, 000 child bearable women aged 11 to 45 years

Activities

The Following Six Activities show our work plan...

6. Sustainability by State Government Through State Assembly Legislation

Let Us Begin....!

***...Will this
queue
some day
come to
an end?***

We believe with your support it will.

This is because **obstetric fistula** is entirely preventable and fistula can be successfully repaired and rehabilitated so that all VVF wards will one day close down.

***Obstetric fistula
has all
disappeared in
Europe and
America where
the first
dedicated
hospital was
opened nearly a
hundred and fifty
years ago***

***Let me
illustrate
the
enormity
of VVF
problem.***

According to a study of United Nations Population Fund (UNFPA) and Engenderhealth in 2003, it shows that only 2000 fistula repairs are made all over Nigeria every year and with 1,000,000 women having fistula, it means it will take 500 years before the existing fistula patients can be fully repaired, while the problem is even compounded by the fact that 5000 new cases are added every year.

Partnership

We now use this opportunity to call on other rotary clubs or districts, WHO, UNFPA, Engenderhealth, and other Humanitarian Organisations to partner with us in any of the six activities which has been separated into a matching grant, to be able to contain in a wholistic form the fistula monster.
